

Federal Office Building No. 8
Washington, DC

Boggs + Partners

The base building lighting design is intended to reinforce the architectural and landscape concepts through restrained lighting techniques that will simultaneously provide an aesthetic night image, a sense of security and safety, energy efficiency, LEED compliance, and ease of maintenance. Lighting for normal business hours will be balanced with daylighting contributions. The nocturnal building expression occurs through controlled illumination at the roof line, façade articulations, stair towers, and entry pavilion and atrium.
