

Harbor Station
Prince William County, VA

O'Doherty Landscape Architecture

Alternative roadway lighting was studied for a new parkway that will be part of 900 acres of mixed use development. The developer was interested in upgrading the typical High Pressure Sodium Cobra Head used for roadways in the county. Metal Halide full cutoff luminaires on 30'-0" poles are proposed. Included in the study were alternates for lighting monumental entry walls occurring at the major intersections.
