

Sherman Residence
Bethesda, MD

Photographer: Jeffrey O'Conner

New landscape lighting was implemented in front garden to reveal property contours and entry. Layers of light occur through low level path lights, and perimeter washing of evergreen property limits. The steep hillside of the rear garden was revealed through pole mounted metal halide theatrical projectors concealed on each side of the house. The central water feature incorporates linear LED's, to anchor the upper and lower levels of the garden and visually connect to the existing pool.
