

The World Bank –
Large Video Conference Room
Washington, DC

Forma Design
Photography: Geoffrey Hodgdon

A 40 person conference room with high ceilings had a complex program for lighting which included: multiple small tables for a business dinner, video conference for center table arrangement, and auditorium style seating for lectures. Three lighting systems relating to the architecture were employed and could be overlapped depending on the room use through a dimming control system to accommodate the multiple programmatic functions of the space.
